

## LGLO Valve

Low Gear Lean Out

**CO2 Activated**  
**Normally OPEN**

Flows like a .175 jet  
500 psi seat rating with  
145 psi supply  
pressure.

Used to bleed fuel  
away the fuel system  
in low gear to hop up  
the engine and make  
more heat so you can  
make more power

when you close the valve in second gear by using the heat to burn  
more fuel. The Ken Lowe LGLO valve comes with Dash 6 swivel female  
fittings. Flow direction is in the blue fitting and out the red fitting.  
Will operate with as little as 65psi but the fuel system pressure then is  
limited to 120 psi

**Dash 6 JIC swivel fittings in and out.**

For electrical applications use the Ken Lowe NC or NO electric valves for a LGLO or an electric  
high speed.
