

Mullins Blocks

2 Port Fuel Log

All ports are Dash 8

PN 35216-10028

List Price \$145.00+

Racer Decal Discount Price \$ 125.00+

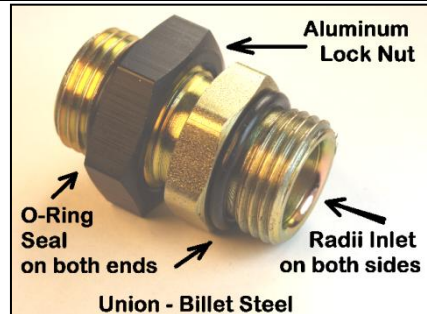

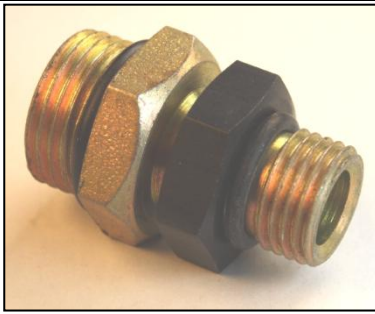

The Mullins block was originally designed to collect return fuel from several sources and return them via one hose back to the pump inlet or back to the fuel tank. In fact now these blocks provide a range of duties and can be used in many applications limited only by ones imagination. We have provided mounting holes on the corners should they need to be mounted to a plate.

They are available in two, three and four hole Dash 8 configurations this is what is available across the "top" of the block with dash 8 on both ends as well as the bottom.

All ports are SAE o-ring thread for better sealing and the block is gold anodized to protect from the stresses of methanol fuel. If mounted on the outlet port of the fuel shut off we highly recommend our gold zinc coated billet steel dash 8 locking union. This union provides a lock nut and O-Ring seal to allow the installation to be done as a desired angle and insure a complete seal at the thread. There are three different sizes of fuel shut offs and as such there are three different size ports. The Mullins Blocks all have Dash 8 ports. On a Dash 6 fuel shut off you will need a Dash 6 x Dash 8 union while on a Dash 10 fuel shut off you will need a Dash 10 x Dash 8 union. Please select from the chart below.

Billet Steel Locking Union

Part Number	Description of Male Union	List Price	RDD
35247-10608	Union Dash 6 x Dash 8	\$40.00+	\$30.00+
35247-10808	Union Dash 8 x Dash 8	\$40.00+	\$30.00+
35247-10810	Union Dash 8 x Dash 10	\$45.00+	\$35.00+

We have other size unions available as well – please consult our web site for more information.
