

Overcenter Spring Kit

There you are, charging for the finish line, wide open throttle, you are on a good pass and then the car noses over and smoke billows from the exhaust. What happened? Your fuel shut off valve vibrated closed allowing part of the fuel you engine needed to return to the tank. Yep, she leaned out and not only cost you a race but a set of pistons and more. Don't feel too bad, you are not the first person this has happened to. Maybe you just didn't know it could happen but now you do know it can happen.

So it has never happened to you, or at least not yet. You can prevent it from happening with the **“OverCenter Spring Mount Kit”**.

The spring keeps the fuel shut off open or closed as you desire. The bracket easily slips over the body of the housing on the Enderle fuel shutoff. Simply tighten the clamp screw to secure it in place and snap the spring on. Now you are safe from this potential disaster. Sometimes the simplest ideas are the best.

Call and order your now and prevent a disaster from happening to you.

Enderle fuel shut off over center spring mount

(BLUE) Dash 6 fuel shut off body - 1.010" dia pn 53090-35204
