

# Ken Lowe Race Cars rebuilds and reconditions superchargers

## Make your supercharger perform like new.

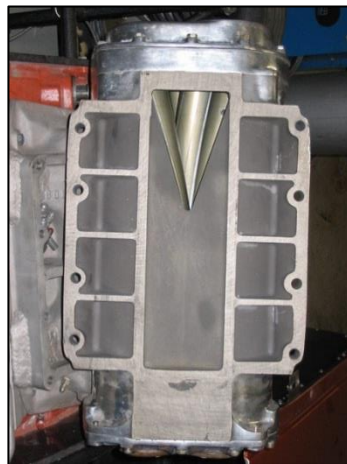

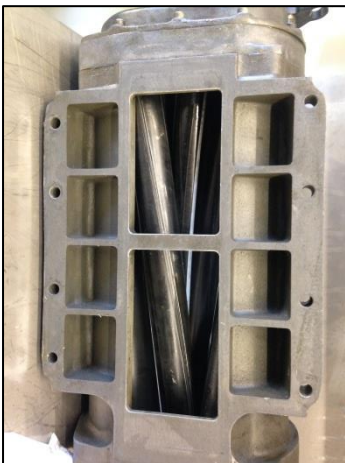

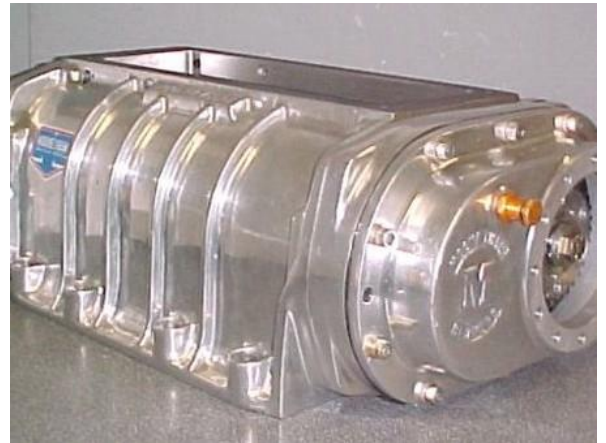

A complete stock of Teflon, Nylatron, even in oversizes and a stock of bearings and seals allows us to bring your blower back up to the original performance standard.

Re-machining, setting all the clearances and retiming all performed in house.

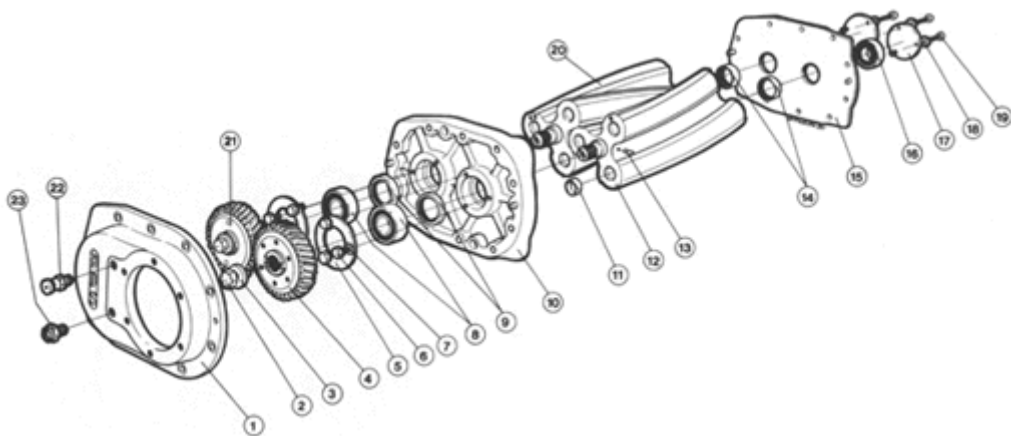

Call Ken at 0411-699 535 and must apologize if we are a little hard to get on the phone as sometimes it is just not possible to take your call at the time but rest assured if you leave a number we will call you back as soon as possible.

Remember - Calls from withheld numbers are not possible to return.

Blower belts, pulleys, idlers, idler brackets and drives are in stock as well as burst panels, blower studs, manifolds and injector hat adapters.

We often have good used trade in blowers on hand, call to see what we have in stock.

**Freshening up your blower can often give you a two tenths or better improvement in performance as a fresh blower will ramp up the boost much quicker than a worn blower will. Call 0411-699 535 now to book your blower in and go quicker at the next race.**
