

Wheel for Wheelie Bar

Billet aluminum with ½" inch inside diameter sealed high speed ball bearings.

3" (75mm) OD

Bearing ID is .500 (1/2")

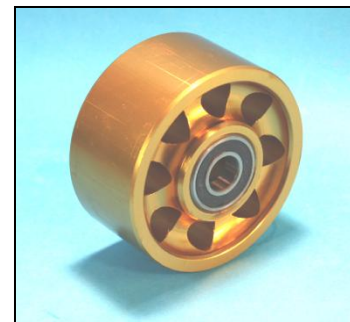

1.60" wide at the bearing

Plain PN 68785-10003

List Price \$ 155.00+ RDD \$ 125.00+

Anodized GOLD PN 68785-10004

List Price \$ 175.00+ RDD \$ 145.00+

We have tried many different types of wheels for use in a wheelie bar application, everything from skate board wheels to trolley wheels and sadly none of them hold up well. If you consider the operating environment the wheelie bar wheel endures and the load it endures it seems that there is little if anything in the normal market place that will fit the application. Something's will work... for a while but it seems that failure is always eminent. We decided to make ours out of a solid billet aluminum as we deemed the rubber coating found on most wheels to be unnecessary. We have made heaps of these and so far we have never had a failure, more than I can say for trolley wheels.
